Technology: Java/J2EE and SQL,
Team Size: 15
Organisation: Agile Software Ent.Pvt.Ltd(acquired by Oracle INDIA Pvt Ltd)
This project addresses managers and executives who use Agile PPM to record, monitor, and track progress of projects and programs. PPM has features that enable you to plan, manage, and execute projects. You can classify the features of PPM into the following categories: Project Planning, Resource Management, Project Collaboration and Project Tracking. Executives use the PPM Dashboards to view portfolio data pertaining to all projects or programs. This includes risks such as schedule slips, lack of resources, and project cost that directly contribute to the overall status of the project.
2. Agile PLM SDK (Software Development Kit) (From Jan-2007 to July-2007):
Technology: Java/J2EE and SQL,
Team Size: Five,
Organisation: Agile Software Ent.Pvt.Ltd(acquired by Oracle INDIA Pvt Ltd)
The Agile PLM SDK is a collection of tools, application programming interfaces (APIs), sample applications, and documentation. It is used to build custom applications that access Agile Application Server functionality. By using the Agile SDK, you can create programs that perform tasks automatically against the Agile PLM system. The Agile SDK enables to integrate the Agile PLM system with ERP applications or other custom applications, develop applications to process product data and perform batch operations against the Agile Application Server.

 Technology/Tools/IDE: Java, SQL Apache-AXIS, Weblogic App Server, etc
 Team Size: 4,
 Organisation: ORACLE India Pvt Ltd
 Summary: Features:
 Privilege Comparison - This level will perform a comparison between all privileges granted to the user, System privileges, Role privileges and/or Object privileges are compared.

Sequence Comparison - This level will perform a comparison between all sequences found on the databases, it can also compare the "last value" of the sequences.

Table Structure Comparison - This level will perform a comparison between all table structures accessible to the user.

Index Comparison - This level will perform a comparison between all the indexes found on all the tables that are common to the databases.

Constraint Comparison - This level will perform a comparison between all constraints found on the databases, both System generated constraints and/or User generated constraints are compared.

Table Data Comparison - This level will perform a comparison of all the data found in common tables (including their columns) between the databases. It uses a heuristic algorithm to place the rows that have differences in a manner that makes sense for the user to review.

View Data Comparison - This level will perform a comparison of all the data found in common views.

Trigger Comparison - This level will perform a comparison between all triggers.

View Structure Comparison - This level will perform a comparison between all views' source.

Function Comparison - This level will perform a comparison between all the functions.

Package Comparison - This level will perform a comparison between all the packages.

Package Body Comparison - This level will perform a comparison between all the packages body.

Stored Procedure Comparison - This level will perform a comparison between all the stored procedures.

Type Comparison - This level will perform a comparison between all the types.

Type Body Comparison - This level will perform a comparison between all the types body.

In order to make it easy to understand the output of the comparison, DBDiff for Oracle creates a report that includes all the differences in a user friendly manner. Also reported is other useful information about the databases and the comparison.

Technology/Tools/IDE: Oracle Fusion, Java, SQL, Apache-AXIS, Weblogic App Server, etc
Team Size: 1,
Organisation: ORACLE India Pvt Ltd
Summary:
Descriptive flexfields provide customizable "expansion space" on your forms. You can use descriptive flexfields to track additional information, important and unique to your business, that would not otherwise be captured by the form. Descriptive flexfields can be context sensitive, where the information your application stores depends on other values your users enter in other parts of the form. I have integrated this feature into Items and change objects of PLM.

 25. Oracle PLM Change Order Management (From Jan-2015 to Dec-2019):
Technology: ORACLE Fusion Tech. Stack, Java/J2EE and SQL,
Team Size: 10
Organisation: Oracle INDIA Pvt Ltd
Summary: When the engineers are done authoring a part's attributes and design information and are ready to publish it to the manufacturing system, they release the part on an Engineering Change Order (ECO) or Manufacturing Change Order (MCO). In addition, during the design phase, an assembly can go through multiple design changes, which are revision-controlled by means of ECOs. A design change may be accompanied by a change in specifications, which

can be attached as files to the item object. Within Agile PLM, the change release process used for releasing new parts and part updates (Revision, Manufacturer, and Site changes) uses three types of change orders:

ECO: used for releasing changes to design, attributes, and Bill of Materials (BOM). The ECO release results in the creation of a new revision for the item.

MCO: used for releasing changes to manufacturer, manufacturer parts and related attributes (Approved Manufacturer List information). The MCO does not result in a change of Revision.

Site change order (SCO): used for releasing changes to site and site-specific AML information. SCO does not result in a change of revision and life cycle phase. SCO is applicable only to a customer environment that has implemented Multi-Site.

26. Oracle PLM Item Management (From Nov-2015 to Dec-2019):

Technology: ORACLE Fusion Tech. Stack, Java/J2EE and SQL,

Team Size: 10

Organisation: Oracle INDIA Pvt Ltd

Summary: Agile PLM enables companies to manage individual product life cycles and to complete product portfolios and programs tied to product conception, design, launch, maturity, and phase-out. Primary users of Agile PLM are involved directly or indirectly in the product design. These users manage content in Agile PLM that often directly affects processes managed in other enterprise systems, such as JD Edwards EnterpriseOne, Manufacturing Execution Systems (MES), Customer Relationship Management (CRM), and so forth.
